

Managed Extended Detection & Response (XDR) Overview

Solution Overview

Despite increased spending on security measures and awareness training, security incidents are on the rise due to human error, unknown software vulnerabilities, and a surge in cyber attacks. To combat these threats, you need to rethink the traditional approach to security. Netgain's Managed XDR solution establishes a holistic view of your security posture. It consolidates data from various security controls and applies artificial intelligence (AI)-based technology to detect threat signals. Coupling this powerful technology with Netgain's security team layers in human expertise to correlate, isolate, and expediently remediate any threats before they cause disruption to your business.

There are four primary components of Netgain's Managed XDR solution:

1

Advanced AI-based Technology Platform

Consolidated, real-time view of critical data across the entire attack surface (endpoints, servers, networks, identities, email, applications) and disparate security controls using Netgain's AI-powered security platform.

2

Intelligent Optimization

Intelligent AI-driven algorithms that adapt to your company's users and infrastructure behavioral patterns while actively monitoring and identifying potentially suspicious user activity or abnormal behavior before it becomes a bigger issue.

3

Expert Human Intervention

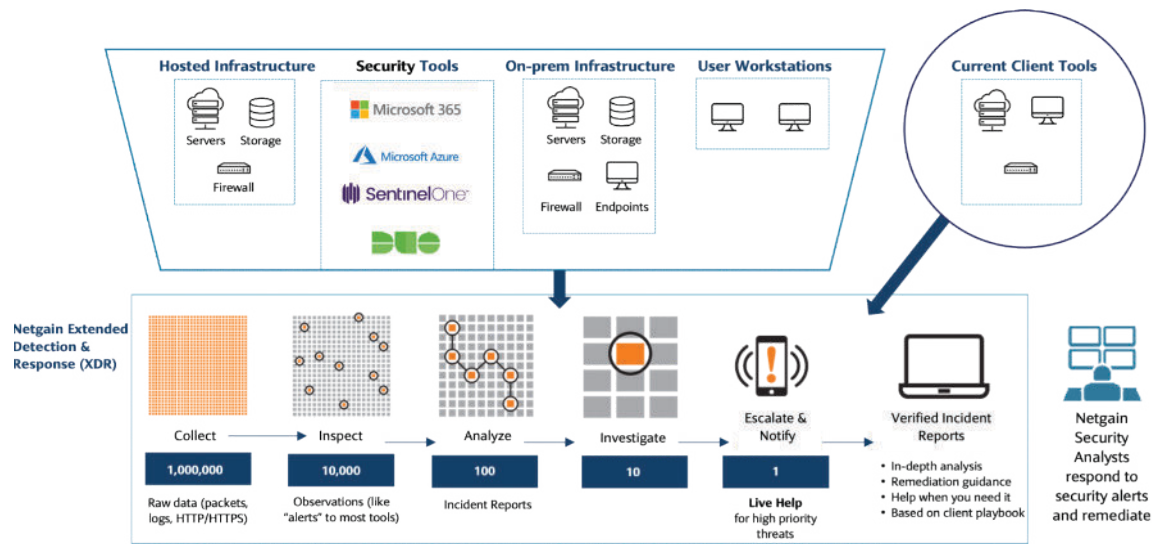

Trained Netgain security experts actively monitor your environments 24/7 and provide swift triage and remediation for any potential incidents ranging from suspicious user activity to more sophisticated and persistent attacks.

4

Monthly Security Reviews

Netgain's security experts host monthly sessions with your key IT stakeholders, armed with an intuitive dashboard of your company's security posture that highlights potential vulnerabilities and emerging risks. They collaborate with your IT staff to develop and drive an actionable plan aimed at addressing any gaps or risks. Netgain also provides you with an audit-compliant report, streamlining your compliance obligations.

What Is Unique About Netgain’s Solution?

Netgain’s Managed XDR solution is custom built for the needs of accounting firms and healthcare providers that need to elevate their security posture and gain peace of mind in the process.

Outcomes Not Alerts

Unlike traditional security providers that focus largely on identifying suspicious activity, Netgain works across the complete lifecycle—prevention, identification, correlation, containment, and remediation. Once an issue is identified, Netgain’s security experts work around-the-clock to fully contain and eliminate the threat.

24/7/365 Protection

Cyber threats surface anytime with attackers known to target businesses during off-hours and holidays; Netgain’s Security Operations Center (SOC) is staffed 24/7 by a team of security analysts and incident responders who provide real-time monitoring, investigation of potential threats, incident containment, and remediation activities.

Unlimited Data Ingestion

Unlike most current XDR solutions that charge for ingested data by volume, Netgain provides a simplified and predictable pricing structure based on users or devices.

Built-in Log Retention

For businesses that need to retain their system logs for compliance, Netgain’s solution comes with one-year log retention and on-demand access to address ongoing reporting and compliance needs.

Streamlined Compliance

Netgain’s monthly security posture report is designed to simplify your compliance, cyber insurance, and audit activities for your organization.
